Project Purpose

- Estimate treatment need
- Understand county needs
- Understand population needs

Project Questions

- How many people need treatment?
- Are there patterns in need and unmet need?
- Where are the gaps in the system?

Project Design

- Synthetic estimates
- Social indicators
- Capacity analysis
- Gap analysis

Synthetic Estimates: Treatment Need

- DSM-IV abuse or dependence
- 2003 NHSDUH prevalence rates
- MSA designations
- Kansas demographics
- Age, race, and gender calculations

Unmet Need and Demand

- Unmet Need

- Exclude those who receive treatment

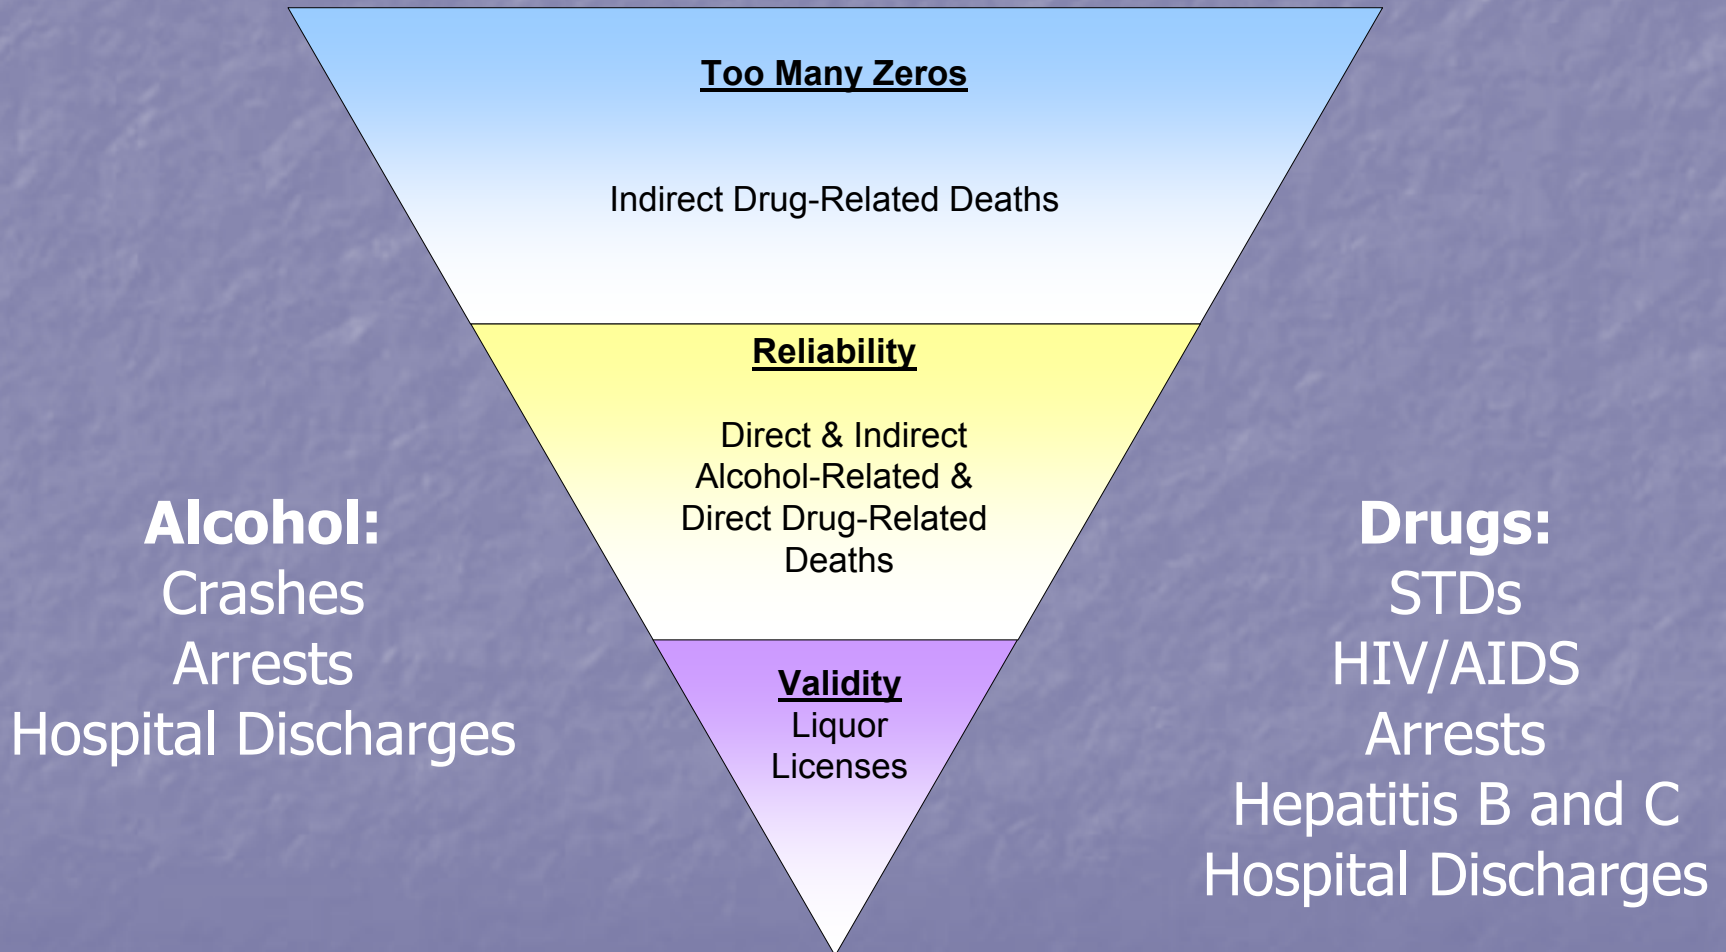

- Unmet Demand

- Felt a need for treatment, **and**
 - Tried to access treatment, **and**
 - Did not get it

Social Indicators

- Alcohol and drug indicators (2001 – 2004)
- Reliable, valid indicators
- Mean rates across years
- Combined into alcohol and drug indices
- Created one overall index

Social Indicators

Capacity Analysis

- Funded and non-funded programs
- By modality
- By treatment population

Gap Analysis

- Synthetic estimates provide numbers
 - Unmet need liberal
 - Unmet demand conservative
- Social indicators provide ranks
- High need – Low utilization = Biggest gap

How to Use These Results

- Strategic planning
- Resource allocation
- Proposal writing

Estimates of Need

Kansas Demographics

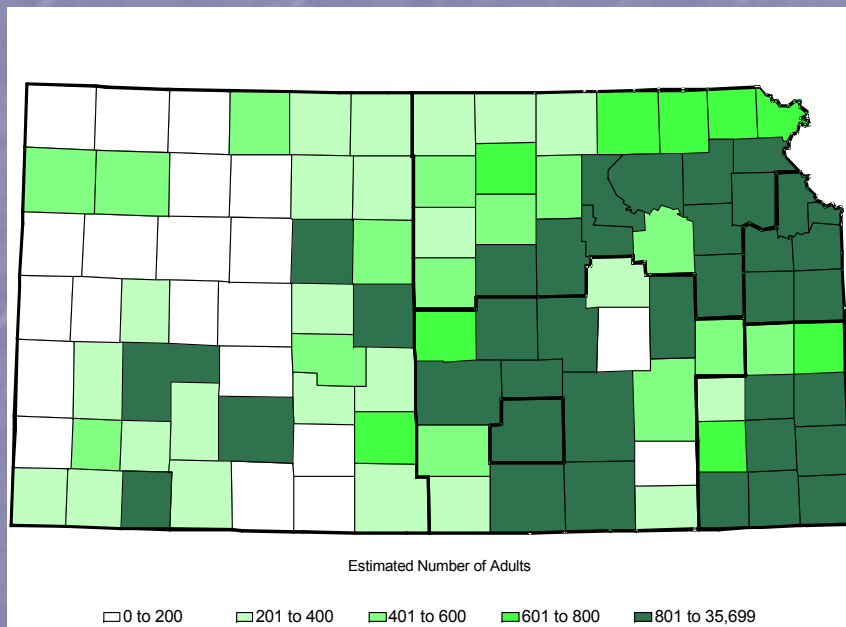

- Slower growth than the nation
- Some counties growing rapidly
- Less diversity than the nation
- Some populations growing rapidly

Statewide Treatment Need

	Number in Need	% in Need
Adults	200,581	10%
Adolescents	24,574	10%

Adolescent Males

■ Alcohol Only ■ Any Drug Only ■ Alcohol and Drugs

Adolescent Females

■ Alcohol Only ■ Any Drug Only ■ Alcohol and Drugs

An abstract painting featuring broad, expressive brushstrokes in shades of yellow, green, and brown. The composition is layered, with darker green and brown tones in the background and brighter yellow strokes in the foreground. The overall effect is textured and dynamic.

People with HIV/AIDS

HIV/AIDS and Substance Abuse

- Heavy drinkers – 8-12%
- Drug dependence – 13%
- Non-dependent drug use other than marijuana – 26%

Sources: Bing et al., 2001;
Galvan et al., 2002

An abstract painting with a textured, brush-stroke appearance. It features a large, bright yellow and orange shape on the left side, resembling a sun or moon, and a smaller, similar shape on the right. The background is a mix of dark green, grey, and brown tones. The entire painting is framed by a white border with a slightly irregular, hand-drawn edge.

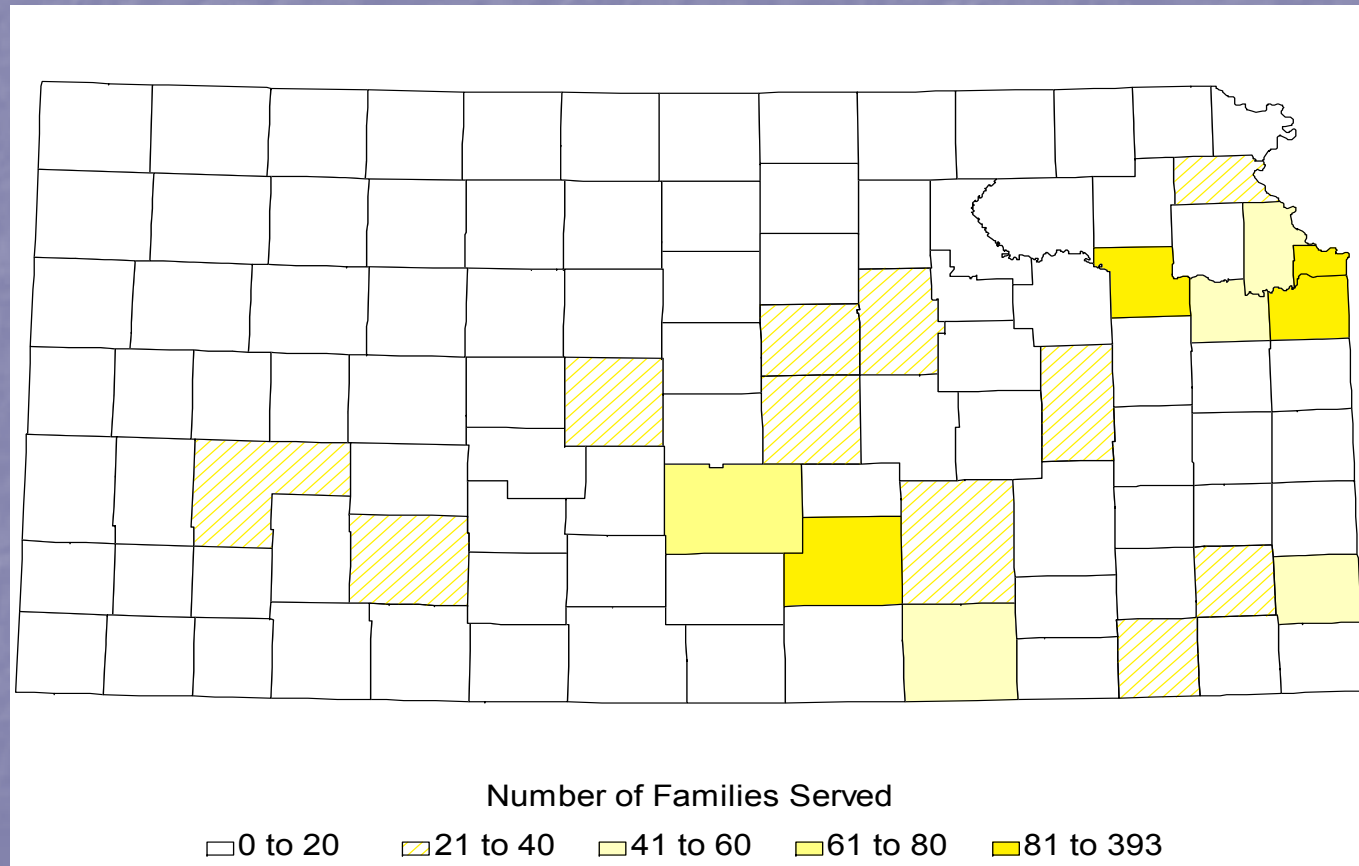

Parents Involved with Children's Services

Parental Substance Abuse

- Estimates vary widely
- Can be difficult to detect
- Lower bound, conservative estimate: 26%
 - Source: Libby et al. 2006
- Upper bound, liberal estimate: 79%
 - Source: Besinger et al., 1999
 - Applies to children out of home for 5 months or more

	Male	Female
Adults	1,821	1,123
Adolescents	132	58

Preliminary Conclusions

Preliminary Conclusions

- Twice as many men need treatment for any drug as women
- Alcohol is the most prevalent substance for adults
- Alcohol treatment need is about equal for men and women

Preliminary Conclusions

- About equal numbers of boys and girls need Tx
- Girls are more likely to need alcohol Tx
- Girls slightly more likely to need meth Tx
- Adolescents more likely to need Tx for drug use than adults
- Adolescent meth Tx need prevalence 2.4% higher than adults

Preliminary Conclusions

- Most who need Tx do not get it
- Adolescents receive Tx at 1.7 times the rate of adults
- Boys Tx needs are met at a higher rate than girls

Preliminary Conclusions

- Counties with largest adult Tx gap:
 - Grant
 - Seward
 - Leavenworth
 - Johnson
 - Stevens
 - Doniphan
 - Divided between high and low population counties

Preliminary Conclusions

- Counties with largest adolescent Tx gap:
 - Sheridan
 - Marshall
 - Mitchell
 - Wallace
 - Osborne
 - Hamilton
 - All relatively low population counties

Preliminary Conclusions

- Counties in need without a detox program
 - Finney
 - Seward
 - Geary
 - Cherokee

Preliminary Conclusions

- Finney County has high need but only provides adult OP Tx
- Hard to provide family-based adol Tx
- Women's Tx programs are few – even in areas of great need

Politics and Policy

DATA CORP • Innovative Research and Design Consultants

Policy and Political Goal

- Eliminate or radically reduce intensity and rate of *need* for treatment
 - Never get to place of needing treatment
 - Get cleaned up earlier (e.g., “raise bottom” or banish “unmet demand”)
 - Close gap in treatment where needed
 - Reduce need for repeat treatment or relapses

A large, bright yellow circle with a black spiral line winding inward from the outer edge towards the center. The text "Clear sighted target" is written in a bold, black, sans-serif font across the middle of the circle.

Clear sighted target

Reduce harms caused by addictions

- Reduce violent victimization
 - Children
 - Spouse/partner/ or others
- Reduce property losses
 - Robbery, theft, embezzlement
 - Environmental damage
- Reduce related morbidity and mortality
 - Health (e.g., cancer, cardio-vascular, HIV, Hep B or C)
 - Mental (e.g., “kindling”, depression, bipolar, personality disorders)
- Reduce intergenerational “contagion”
- Reduce other welfare, economic and educational burdens

Cost Case Study of Billy

■	Pre-birth & infancy	\$58,000
■	Early childhood years	\$34,300
■	Elementary school years	\$74,100
■	Secondary & teen years	\$475,700
■	Other adult years	\$894,00
■	Total	\$1,536,100

Saving 100 “Billy’s” can save \$150 mil.

Full case history at: www.paxtalk.com

RFP Take Away #1

- How will your proposal address these specific policy and political goals?
- What measurable effect will your proposal have on county, multi-county areas or state-level indices?
- How does your proposal address issues of unmet demand, unmet need, and service surplus?
- What *new* ways do you need to do your business/service to achieve these goals?
- What ways of doing business/service do you need to *give up* to achieve these goals?

RFP Take Away #2

- How do these different ways of doing business/service change the ways you propose to deliver services, be located, be staffed and be reimbursed?
- What new relationships do you need to form to achieve these goals?
- What incentives do you propose for achieving these goals?
- How will you and others know that you are making progress on the goals (your local data dashboard)?

RFP Take Away #3

- How do you have to change your management plans, products, procedures and structures to achieve these goals?
- What evidence do you have that your plan or proposal will work to achieve the goals?
- What can the state or others do to help you achieve the goals? (Besides writing more checks to you)

Big Picture: Reducing Per Capita Adult Need for Alcohol Treatment

- Identify modifiable risk or protective factors are low counties versus high counties doing differently?
 - Environmental?
 - Enforcement?
 - Early screening and intervention?
- Provide funding for strategies to reduce per capita need
- Provide county level incentives for reducing per capita need

Big Picture: Reducing Per Capita Adult Need for Alcohol Treatment

- Legislative or Policy
 - Screening via health care, drivers license and arrests
 - Incentives for sobriety
 - Health care
 - Insurance
 - Business credits
 - Testing negative on bio-assays
 - Disincentives
 - Variable consumption taxes
 - Eliminate alcohol deduction for entertainment
 - Variable liquor license fees based on contribution of licensee to per capita alcohol related crimes (Australian and New Zealand research)

Big Picture: Reducing Per Capita Adolescent Need

- Get some answers:
 - How does the poly-drug use of teens change treatment and prevention? (One in 18 for adults use Meth v. Alcohol; one in 7 adolescents use Meth versus Alcohol)
 - What is the “gender equity” in treatment need among adolescents saying about treatment and prevention services?
- Identify modifiable risk or protective factors in low versus high counties
 - Environmental?
 - Enforcement?
 - Early screening and intervention?
 - Developmental history and interventions
